

The Tower of Hanoi

(aka The Tower of Brahma)

This is a very old puzzle from Asia.

Start with the three smallest pieces on the end peg in order of size, with the largest on the bottom.

Try to move all three to the peg at the other end (so they end up in the same order) using the following rules:

- Only move one piece at a time
- You may not place a larger piece on top of a smaller piece

Now try starting with 4 pieces, then with 5 and so on.
