

Huw Bennett 9X1 Mr. Ball

How I scored the Guesses

The person with the least points wins. The number of points they get is how far away the median of their guess is and what their range of guess is added together to make their final score.

1. 8kg is how close the median is to the weight and 20 is the range of the guess, therefore person one gets 28 points.

2. 0.5kg is how close the median is to the weight and 25 is the range of the guess, therefore person two gets 25.5 points.

3. 26kg is how close the median is to the weight and 52 is the range of their guess, therefore person three gets 78 points.

4. 4.5kg is how close the median is to the weight and 5 is the range of their guess, therefore person four gets 9.5 points.

5. 3kg is how close the median is to the weight and 0 is the range of their guess, therefore person five gets 3 points.

Scoreboard

1st	Person five.	3 points.
2nd	Person four.	9.5 points.
3rd	Person two.	25.5 points.
4th	Person one.	28 points.
5th	Person three.	78 points.
