

# Angles, Polygons and Geometrical Proof

## Stage 4 ★★

### Mixed Selection 1 - Solutions

#### 1. Quarters

The diagram shows the top-right-hand portion of the square.

The shaded trapezium is labelled QXYZ and W is the point at which ZY produced meets PQ. As QXYZ is an isosceles trapezium,  $\angle QZY = \angle ZQX = 45^\circ$ .

Also, as YX is parallel to ZQ,  $\angle XYW = \angle WXY = 45^\circ$ . So WYX and WZQ are both isosceles right-angled triangles. As  $\angle ZWQ = 90^\circ$  and Z is at centre of square PQRS, we deduce that W is the midpoint of PQ. Hence  $WX = XQ = PQ/4$ . So the ratio of the side-lengths of similar triangles WYX and WZQ is 1:2 and hence the ratio of their areas 1:4.

Therefore, the area of trapezium QXYZ  $= \frac{3}{4}$  x area of triangle ZWQ  $= \frac{3}{32}$  x area PQRS since triangle ZWQ is one-eighth of PQRS. So the fraction of the square which is shaded is  $4 \times \frac{3}{32} = \frac{3}{8}$ .

#### 2. Angle to chord

Let  $O$  be the centre of the circle. Then  $\angle POR = 90^\circ$  as the angle subtended by an arc at the centre of a circle is twice the angle subtended by that arc at a point on the circumference of the circle.

So triangle  $POR$  is an isosceles right-angled triangle with  $PO = RO = 4\text{cm}$ . Let the length of  $PR$  be  $x$  cm.

Then, by Pythagoras' Theorem,  $x^2 = 4^2 + 4^2 = 2 \times 4^2$  and so  $x = 4\sqrt{2}$

# Angles, Polygons and Geometrical Proof

### 3. Diagonal touch

Let  $x$  and  $y$  be the distances shown.

Then the shaded area is  $8y + x$ . But there are a number of similar triangles and from one pair

$$\frac{x}{8} = \frac{y}{1} \text{ therefore } x = 8y.$$

So,

$$\frac{\text{shade area}}{\text{total area}} = \frac{8y + x}{9(x + y)} = \frac{8y + 8y}{9} \times 9y = \frac{16}{81}$$

### 4. Isosceles reduction

Triangles  $PRS$  and  $QPR$  are similar because  $\angle PSR = \angle QRP$  (since  $PR = PS$ ) and  $\angle PRS = \angle QPR$  (since  $QP = Q$  ).

Hence  $\frac{SR}{RP} = \frac{RP}{PQ}$ , that is  $\frac{SR}{6} = \frac{6}{9}$ , that is  $SR = 4$ .
